

## Manufacturing Facility, Small Scale

This is a simple background music and paging system which can be adapted to suit many small to medium sized businesses with offices and warehouse space.

A 2 button paging mic enables the offices and warehouse space to be paged independently and an MP3 player or tuner could be used for background music.

The cabinet speakers in the warehouse could be changed for pendant speakers if there is a high ceiling for more even coverage. Discreet ceiling speakers are used in the office area.
