

## School / Education

This more complex arrangement is based on a fairly large school with its own sports complex and pool area.

A 6 / 8 channel mixer can be used along with a multi-channel power amplifier so that announcements may be heard across the school, or different areas paged individually.

Ceiling speakers have been used in communal areas, such as corridors and reception spaces, classrooms and staff areas. Small cabinet speakers can be wall mounted in the dining hall. In the sports facility Music horns can be used and water resistant column speakers are shown in the swimming pool area.
